

MIGRATING FROM ISDN TO SIP

PLANNING IS KEY

1

What does your current telephone system provide? Decide what you need to keep and any features you ideally would like to have.

DEFINE YOUR OBJECTIVES

2

Identify opportunities and changes that can be made to help your business, which only SIP can offer.

CHOOSE A SIP PROVIDER

3

Ideally what you want is an end-to-end service from a provider who can define improvements, oversee installation, handle all number porting and more.

PREPARE YOUR ENVIRONMENT

4

Consider your current bandwidth - SIP trunks need a decent bandwidth. Is your current phone system SIP compatible? It's best to identify these costs early on.

INSTALLATION AND TESTING

5

At this point you should be ready to hand installation and testing over to your SIP provider.
